

Mednet Medical Billing was founded in 1985, with a solemn commitment: rock-solid quality and consistency in service, with 100 percent transparency in operation. “We believe in delivering on our promises at Mednet,” says Scott Wood, President. “Our experience allows us to quickly evaluate where a practice’s insurance billing challenges reside. We then take immediate action to correct the billing, and bring back a consistent cash flow to the practice.”

It has been 32 years since that initial commitment, and Mednet hasn’t wavered. That timeframe is a significant indicator of Mednet’s quality- after all, three decades in business is no small feat for a medical billing company. The company has always had to keep one step ahead of sweeping changes in the industry, be it technological or policy-based, and has kept up a highly trained and qualified staff throughout.

Mednet offers a host of services, including medical billing, coding, chart audits, credentialing, practice workflow consultations, and healthcare education seminars- and couples this impressive range of services with an absolute commitment to their clients’ success. “It is imperative that we do good work on a consistent basis so that our clients can achieve their financial goals. This is why they hired us, and we must deliver- and exceed expectations,” says Wood. This attention to detail and quality sees Mednet clients paid over one million dollars per month from insurance companies.

Moving forward, the need for qualified medical billing services has never been greater in the United States, and Mednet is hard at work establishing the groundwork for another three decades of world-class service, and beyond. The company plans to continue its ongoing growth by updating and expanding its marketing efforts in New Mexico and the immediate Southwest region, in order to let clients know that there is a high-quality local firm ready to handle all of their billing needs.
